SUMMARY

Final-year B.Tech IT student specializing in Applied AI engineering, high-performance web applications, and intelligent embedded systems. Proven track record of shipping production-ready web apps, deploying ML pipelines, and publishing IEEE research. Certified by Oracle in Cloud AI and Generative AI systems.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C, JavaScript, Dart, HTML, CSS
- **Frameworks & Backends:** React, Bun.js, FastAPI, Flutter, Streamlit, REST APIs
- **Data Science & ML:** Scikit-learn, Pandas, NLP pipelines, Text Classification
- **Tools & DevOps:** MongoDB, Git, GitHub, Postman API Testing, Vercel Deployment
- **Hardware & IoT:** Arduino Uno, microcontrollers, embedded sensor integration

PROFESSIONAL EXPERIENCE

AI Engineering Intern | Edunet Foundation (Microsoft & SAP CSR Initiative) | *Dec 2024 – Jan 2025 (Remote)*

- Completed an advanced AI & NLP engineering curriculum focused on predictive modeling, feature extraction, and dense data pre-processing pipelines.
- Engineered an end-to-end text classification application using supervised ML models to filter fraudulent spam scripts, deploying the final tool live via Vercel.

PROJECTS

Stockfy – Full-Stack Stock Maintenance Platform (*React, Bun.js, MongoDB, Vercel*)

- Developed a scalable inventory tracking platform featuring secure admin/user portals and real-time transaction logs. Integrated a responsive layout with a minimal Bun.js backend server and MongoDB database layers for efficient state management. **[Live: <https://stockfy-ruddy.vercel.app/>]**

SMS Spam Detection System – Applied ML Web App (*Python, Scikit-learn, NLP, Streamlit*)

- Constructed an NLP model using TF-IDF vectorization pipelines to analyze text dataset behaviors. Achieved 94% model accuracy using Scikit-learn supervised classifiers, deploying live via Streamlit. **[Live: <https://sms-spam-detection-g8hwjjwbrqspzpdmbajob.streamlit.app/>]**

Drowsiness Detection System – IoT Driver Safety (*C, Arduino Uno, Hardware Sensors, WiFi*)

- Built an embedded driver fatigue monitoring device integrating an Arduino Uno and custom infrared sensor arrays. Programmed real-time logic using C to trigger remote WiFi alerts with sub-2-second overall system latency.

Two Player Flutter Game – Mobile & Web Platform (*Dart, Flutter, Cross-Platform UI*)

- Architected a cross-platform competitive mobile game utilizing Dart and the interactive Flutter framework architecture. Optimized client data packets to handle real-time global score tracking pipelines seamlessly on the web. **[Live: <https://twoplayapp.vercel.app/>]**

EDUCATION

B.Tech in Information Technology | Kalasalingam Academy of Research and Education | 2022 – Present (CGPA: 7.98)

Higher Secondary Education | S B K Higher Secondary School | 2016 – 2022

CERTIFICATIONS

- Oracle Cloud Infrastructure AI Certified Foundations Associate & Generative AI Certified Professional
- Postman API Fundamentals Student Expert
- Great Learning: Java Programming · UI/UX for Beginners · Introduction to AI
